

Maestro[®] - Well Test Automation with Human-Verified Control.

Maestro[®] orchestrates operations, combining data, decisions, and control in a modular platform, giving you the efficiency benefits of automation and remote control with human verification.

Why Maestro[®]?

Red zone avoidance

Maestro[®] combines technology-driven automation and remote control with human-verified decisions to reduce the exposure of personnel to hazardous areas and operational safety risks.

Modular and scalable

Maestro[®] is a flexible and configurable system that integrates remotely controlled and autonomous equipment with human-controlled deployment to match your exact needs.

Faster decision making

Maestro[®] accelerates informed decision making through real-time data, automated alerts, and remote visibility to quickly identify potential upset conditions.

Smarter emissions management

Maestro[®] supports emission reduction goals through technically advanced equipment, data-driven monitoring and intelligent control.

Designed for

- Offshore and onshore Well Testing
- Exploration and Appraisal Development
- Extended Well Testing
- Clean-up and Flowback operations
- Production inline testing
- Sand and Solids handling
- High H₂S and High CO₂ Special Operations
