

EXPRO[®]

Engineered Solutions

With a comprehensive service offering, Expro is your one-call for complete pipeline cleaning and commissioning projects.

Our accomplished Project Managers and in-house Midstream Engineers will take the burden off your shoulders in the planning and execution of a complicated job scope. Expro will help make even the most daunting of pipeline operations, truly turn-key.

Applications:

- Project Time Management
- Turnkey Seamless Solutions
- Integrity Compliance
- Storage Well and Cavern Solutions
- Pipeline Flow Simulations
- Engineered Chemical Cleaning Programs
- Complicated Pigging Plans with Velocity Control

Why Expro's Engineered Solutions:

- In-House Engineering
- Pipeline Separation and Filtration Simulations
- Clean Burning Flare System Simulations
- In-House Chemical Cleaning Plans
- Network of Trusted Partners
- In-House Pigging Solutions
- Additional Expro Service Product Lines

Expro Integrated Services

+11

Our extensive experience ensures Expro delivers seamless, efficient operations by integrating the best products and technology for optimized project results.

Our Process Flow Simulations predict pipeline performance before mobilization, while Predictive Modeling assesses flaring impacts on heat and noise in sensitive areas. The Velonix™ system ensures ideal and stable pig velocities, while our knowledgeable Project Managers keep every project running smoothly and efficiently.

From Engineering designs to fully Project Managed solutions.

- Data capture
- Pipeline pigging rate support services
- Industry and application specific software and technology
- Highly qualified, experienced professionals
- Customized chemical pipeline cleaning plans and execution

Increasing integrated product offerings and patented technology.

- In-house experienced pipeline engineering team
- Integrating laboratory analysis, flow assurance, custom chemical solutions, and project management
- Patented, fully automated pipeline flow management during pigging operations
- Experience in successful cleaning of liquid, gas, and total fluids pipelines with a wide range of varying contaminants
