Well Construction

Frank's Tubular Running Service (TRS) - Casing Technologies

Rack Back Console

Features and Benefits

- Specifically designed to control elevators and spiders to build double, triple, or quad stands for racking back in the derrick
- Runs a preprogrammed sequence and prevents the elevator and spider from operating outside the sequence, to reduce the potential for dropped joints or stands
- Provides both RUN and PULL Modes for building and laying out stands, even if only to temporarily back up a step or two
- Programming drum provides visual labels for the operator to reference as needed, to descriptively indicate which sequence step is in progress
- Requires CAM tech or tong operators confirmation of proper connection make-up before advancing
