

PLUG RUNNING TOOL

Blackhawk's Plug Running Tool is utilized for running single and dual wiper plugs on liners and sub-sea casing strings that are 7" OD and larger. The Plug Running Tool can incorporate an intermediate sub with a ball seat for setting hydraulically activated liner/casing equipment or for testing a Diverter Sub in the workstring. Also, this tool incorporates an annular valve which eliminates trapped pressure above the wiper plug when the running tools are manipulated to check for running tool release.

FEATURES

- Positive locking mechanism for reliable deployment.
- Internal seal for reliable launching pressure.
- Emergency release to ensure plug release.
- Ball seat option for setting hydraulic hanger or testing Diverter

SPECIFICATIONS

Plug Running Tool		
	7-7 5/8	9 5/8 and larger
