

Downhole Camera & Video Services

Where clarity delivers insight

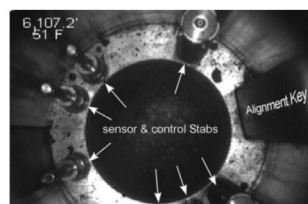

When well performance or integrity is in question, nothing provides more certainty than a clear picture. Expro's Downhole Camera and Video portfolio delivers high-resolution images and video of in-well conditions - enabling operators to reduce uncertainty, optimise intervention time, and make confident decisions

Expro's downhole camera DNA stretches back to 1987, when Downhole Video International pioneered the use of in-well video - a company that became part of Expro in 2005. Today, that heritage is combined with our own designs and partnerships with leading technology vendors, ensuring our customers benefit from the widest and most advanced portfolio of downhole cameras in the industry.

Expro can offer solutions for every well environment. Options include memory and SRO cameras, HP-HT systems rated to 400°F and 15,000 psi, side - and downview tools with 360° rotation and superior lighting, colour imaging systems and annulus gate valve deployed cameras for inspection of the wellhead.

With conveyance methods including Slickline, E-Line, Slick-E-Line, CoilHose, and the Octopoda WellSpring Tool, we offer flexibility and efficiency over a range of applications, which include:

From identifying production issues to verifying well integrity and inspecting critical components, Expro's Downhole Camera and Video Service gives you the clarity and confidence you need. With coverage across the entire well lifecycle, our solutions reduce uncertainty, support regulatory compliance and enable faster, safer and more cost-effective decisions to protect integrity and enhance performance.

Tubing Hanger control stabs inspection

Gas Lift Mandrel Inspection

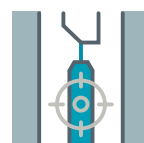

Variable Bore Ram Inspection
(deepwater application)

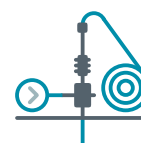

Casing damage inspection

Why choose Expro?

- Access to best-in-class technology
- Flexible deployment methods: Slickline, E-Line, Slick-E-Line, CoilHose™ and the Octopoda™ WellSpring Tool
- Extensive portfolio of production optimisation and well remediation solutions
- Global reach with rapid mobilisation and trusted local execution
