

# Slickline Services

## Slickline Expertise, Operational Efficiency, Trusted Partner

With over 50 years' experience, Expro is the global leader in Slickline Services. We deliver reliable, efficient and safe interventions that maximize productivity, assure well integrity and cut operational costs.

From land-based applications to deepwater subsea wells, and from straightforward drift runs to complex cased-hole interventions, our people, tools, and systems are trusted to perform - every time. This capability extends into some of the most demanding environments, including high-pressure, high-temperature (HP-HT) wells, large bore completions and Riserless Light Well Intervention (RLWI). Expro's expertise in 0.160" Slickline deployment, combined with our large bore pressure control equipment, ensures safe and efficient intervention even in the most technically challenging scenarios.

Slickline services are essential throughout the entire well lifecycle - from field development to decommissioning.

- In the well **commissioning phase**, slickline supports activities such as completion deployment, recovery of temporary suspension barriers, sliding sleeve operations and gas lift valve installation.
- During the **production phase**, slickline interventions deliver flow assurance, production optimisation and remedial work to sustain performance and preserve well integrity.
- At the end of the well's life, slickline services are crucial to cessation of production activities such as temporary barrier placement and well preparation for **decommissioning** and the decom activity itself.

### Key Applications

- Well commissioning
- Downhole Safety Valve (DHSV) reinstatement
- Flow control and zonal isolation
- Gas lift valve change-outs
- Wellbore solids removal
- Fishing
- Conveyance of cased hole services
- Well preparation for cessation of production and well decommissioning

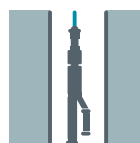

A key strength of our offering is Expro's global fleet of deployment units - from compact, lightweight systems for the smallest offshore platforms to versatile, land-based multi-service units. These units can deploy not only Slickline, but also E-Line, DFOS, Braided Cable and CoilHose™, delivering flexible and efficient intervention across a wide range of operational environments.

### Deployment Unit Types

Type	0.125" SL	0.160" SL	S-E-L	Split Option	Multi-Service
FlyLine 	✓	✓	✓	✓	✓
SlimLine 	✓	✓	✓	✓	✓
UniLine 	✓	✓	✓	✓	✓
MultiLine 	✓	✓	✓	✓	✓
TruckLine 	✓	✓	✓	N/A	✓

### Why choose Expro?

- Over five decades of Slickline Services heritage
- Comprehensive range of deployment systems
- Global reach, rapid mobilisation and local execution
