

# Wireline Deployed Bridge Plug Services

## Setting the standard in zonal isolation

Expro provides a comprehensive range of bridge plug solutions, deployable across multiple wire types to suit every well environment and application. From short-term intervention through to well decommissioning, our systems combine proven designs with flexible deployment - delivering safe, efficient and reliable zonal isolation.

Our bridge plugs are fully API-compliant, providing secure barriers with proven sealing performance and the ability to withstand high differential pressures across a wide range of well conditions. With options that can be retrieved, drilled out, or left in place, our portfolio gives operators the flexibility to reduce intervention time, increase efficiency and assure value across the well lifecycle.

The main wireline deployed Bridge Plug types in our portfolio includes:

### Retrievable Plugs

Unique equalising valve design enables safe recovery and pressure equalisation, reducing operational risk

### High-Expansion Plugs

Smaller OD, high expansion plug specifically designed to set securely and hold pressure in restrictions by using an internal body lock ring

### Cast-Iron Plugs

Proven, dependable, and economical options for permanent isolation and well decommissioning, drillable when required

### Key Applications

- Zonal stimulation
- Water shut-off
- Cement squeeze operations
- Temporary zonal isolation
- Permanent zonal isolation
- Wellhead repair
- Well suspension
- Well decommissioning

Bridge plugs are only as effective as the way they are deployed. Expro offers the wide range of conveyance methods, ensuring operators can select the most efficient solution for their well conditions and job objectives. Whether the requirement is rig-based, rigless or vessel-based - our deployment options provide the flexibility to deliver with minimal operational downtime. Conveyance options include:

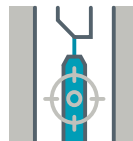

- Slickline
- Slick-E-Line
- E-Line
- Coiled Tubing

In addition to conventional pyrotechnic activation, Expro also offers the K-Set electro-mechanical setting tool - a non-HAZMAT solution. K-Set provides a safer, logistics friendly alternative for setting bridge plugs, while maintaining the flexibility and efficiency required for a wide range of well conditions.

For **Drill Pipe conveyed** applications, Expro can also provide the CX-2 Hydro-Mechanical Bridge Plug which is the industry leading solution for zonal isolation in the well decommissioning phase of the well lifecycle.

### Why choose Expro?

- Portfolio covering retrievable, high-expansion and cast-iron plugs
- Multi-conveyance deployment for maximum operational efficiency
- API-compliant solutions delivering trusted well integrity worldwide
